ACCOUNTIQ BANK CREDIT PAPER

01 Executive Summary

Indicative terms request

This demo bank credit paper for AccountIQ Sample Services Limited is drafted in the same practical style as a lender credit paper: requested facility, source of repayment, security, coverage, balance-sheet support, covenants, conditions and recommendation. Uploaded financials drive the tables; public research is simulated in demo mode until a live AI key is configured.

Screening conclusion

The requested facility of \$1,250,000 requires revised structure or additional support before committee. The calculated supportable debt is \$513,750, headroom / shortfall is \$-736,250, and the binding constraint is Balance-sheet / NTOA support. This remains screening-only until source documents, collateral values, debt schedules and lender terms are confirmed.

Metric	Base case	Threshold / interpretation	Comment
Latest uploaded EBITDA	\$620,000	Credit anchor	Based on 2025.
Requested senior debt	\$1,250,000	Facility amount	Compared with EBITDA, debt service, LVR and NTOA constraints.
Senior leverage	2.02x	Illustrative max 2.50x	Debt divided by latest uploaded EBITDA.
Base ICR	5.84x	Minimum 3.00x	EBITDA divided by cash interest.
Base DSCR	1.74x	Minimum 1.40x	EBITDA divided by cash interest plus scheduled principal.
Target LVR	60.0%	Security advance-rate assumption	Must be confirmed against lender collateral policy.
Supportable debt	\$513,750	Minimum of capacity constraints	The binding constraint should drive the recommended structure.
Headroom / shortfall	\$-736,250	Positive is headroom	Supportable debt less requested debt.
Binding constraint	Balance-sheet / NTOA support	Most conservative available limit	Use this as the credit sizing conclusion unless overridden by bank policy.

ACCOUNTIQ BANK CREDIT PAPER

02 Transaction Summary

The transaction summary sets out the borrower structure, amount requested, debt purpose, term, repayment profile, funding cost and source of repayment. This mirrors the front half of a bank paper where the credit team needs to understand the ask before reading the detailed analysis.

Transaction context supplied

- Transaction Structure: Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.
- Borrower Structure: New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.
- Ownership And Sponsor: Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.
- Acquisition Rationale: Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.
- Refinance Context: Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.
- Facility Structure: Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.
- Security Structure: First-ranking GSA over the operating entities, cross-guarantees and shareholder support; no property security assumed.
- Sponsor Bridge Security: Personal guarantee and negative pledge to be documented separately from the OpCo security package.

Facility term	Proposed / supplied detail	Credit treatment
Borrower / structure	New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.	Confirm legal borrower, guarantors and obligors before credit committee.
Transaction / group structure	Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.	Sets the legal perimeter, obligors and whether acquisition and refinance debt are consolidated.
Ownership and sponsor	Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.	Confirms sponsor rollover, investor contribution, control and key-person continuity.
Acquisition rationale	Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.	Explains the commercial reason for the transaction and any claimed contract or synergy support.
Existing debt / refinance context	Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.	Confirms which existing facilities are being repaid and whether security is being consolidated.
Facility type	Senior secured acquisition and refinance term facility	Used as the base structure for lender screening.

Facility term	Proposed / supplied detail	Credit treatment
Facility structure	Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.	Separates senior operating debt from any sponsor, bridge or ancillary facility.
Amount requested	\$1,250,000	Compared with cash-flow, LVR, collateral and balance-sheet capacity.
Purpose	Acquisition of a complementary operating business and refinance of existing debt	Use of funds drives sources-and-uses and required diligence.
Term	5.0 years	Determines scheduled amortisation and DSCR pressure.
Repayment profile	principal and interest	Principal repayment is modelled unless interest-only is selected.
Conservative funding cost	8.50%	Used for cash interest, ICR and rate-stress sensitivity.
Annual interest	\$106,250	Estimated annual cash interest on the requested facility.
Annual principal	\$250,000	Straight-line annual principal where amortising.
Annual debt service	\$356,250	Interest plus scheduled principal used in DSCR.
Source of repayment	Operating cash flow from the combined group, supported by recurring service revenue and post-completion management accounts.	Primary cash source to service interest, principal and any bridge repayment.
Security package	general security and guarantee	Controls LVR and collateral diligence requirements.
Target LVR / advance rate	60.0%	Conservative lender advance-rate assumption supplied by the user.

ACCOUNTIQ BANK CREDIT PAPER

03 Sources & Uses

Sources and uses are built from the supplied facility amount and any optional refinance, costs, working-capital, equity or bridge details. Where detail is not provided, the table deliberately flags the missing funds-flow evidence rather than inventing a balanced transaction schedule.

Uses	Amount	Sources	Amount	Credit comment
Acquisition of a complementary operating business and refinance of existing debt	\$1,250,000	Requested senior facility	\$1,250,000	Only the supplied request is treated as committed; detailed funds flow remains a committee condition.
Transaction / asset value	\$1,900,000	Equity contribution	\$705,000	Supports LVR/equity context but does not replace a signed sale and purchase agreement or funds-flow statement.
Refinance existing debt	\$280,000	Included in facility request	\$280,000	Debt schedule and payout letters required before credit committee.
Transaction / advisory costs	\$55,000	Facility or equity funding	Not allocated	Legal, advisory, bank and diligence costs should be supported by invoices or estimates.
Working-capital / integration buffer	\$120,000	Facility or retained cash	Not allocated	Buffer should be checked against monthly trading seasonality and creditor terms.
Additional bridge / sponsor facility	\$180,000	Separate bridge funding	\$180,000	Indicative 9-month bridge; repayment source: Refinancing or sponsor distribution after completion accounts and transaction proceeds are finalised..

ACCOUNTIQ BANK CREDIT PAPER

04 Borrower & Sponsor Profile

Borrower profile

Demo-mode public research is not connected. The report therefore treats AccountIQ Sample Services Limited as a private SME operating in New Zealand and relies on uploaded financials plus user-supplied context for business-specific facts.

Sponsor / ownership context

Demo mode has not completed live borrower research. Use the borrower / ownership structure supplied in the intake, Companies Office extracts, guarantor information and management background before presenting this as committee-ready.

Supplied transaction and sponsor context

- Transaction Structure: Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.
- Borrower Structure: New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.
- Ownership And Sponsor: Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.
- Acquisition Rationale: Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.
- Refinance Context: Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.
- Facility Structure: Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.
- Security Structure: First-ranking GSA over the operating entities, cross-guarantees and shareholder support; no property security assumed.
- Sponsor Bridge Security: Personal guarantee and negative pledge to be documented separately from the OpCo security package.

Repayment source

Primary repayment is expected to come from operating cash flow shown in the uploaded financials. Any sponsor bridge, guarantee, property support or shareholder contribution should be documented separately and tested against its own repayment source.

ACCOUNTIQ BANK CREDIT PAPER

05 Facilities Requested

The facility terms below are the lender-screening structure used throughout the paper. The same amount, term, funding cost and repayment profile flow through the DSCR, ICR, LVR and debt-capacity calculations.

Facility structure supplied

- Transaction Structure: Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.
- Borrower Structure: New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.
- Ownership And Sponsor: Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.
- Acquisition Rationale: Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.
- Refinance Context: Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.
- Facility Structure: Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.
- Security Structure: First-ranking GSA over the operating entities, cross-guarantees and shareholder support; no property security assumed.
- Sponsor Bridge Security: Personal guarantee and negative pledge to be documented separately from the OpCo security package.

Facility term	Proposed / supplied detail	Credit treatment
Borrower / structure	New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.	Confirm legal borrower, guarantors and obligors before credit committee.
Transaction / group structure	Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.	Sets the legal perimeter, obligors and whether acquisition and refinance debt are consolidated.
Ownership and sponsor	Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.	Confirms sponsor rollover, investor contribution, control and key-person continuity.
Acquisition rationale	Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.	Explains the commercial reason for the transaction and any claimed contract or synergy support.
Existing debt / refinance context	Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.	Confirms which existing facilities are being repaid and whether security is being consolidated.
Facility type	Senior secured acquisition and refinance term facility	Used as the base structure for lender screening.
Facility structure	Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.	Separates senior operating debt from any sponsor, bridge or ancillary facility.

Facility term	Proposed / supplied detail	Credit treatment
Amount requested	\$1,250,000	Compared with cash-flow, LVR, collateral and balance-sheet capacity.
Purpose	Acquisition of a complementary operating business and refinance of existing debt	Use of funds drives sources-and-uses and required diligence.
Term	5.0 years	Determines scheduled amortisation and DSCR pressure.
Repayment profile	principal and interest	Principal repayment is modelled unless interest-only is selected.
Conservative funding cost	8.50%	Used for cash interest, ICR and rate-stress sensitivity.
Annual interest	\$106,250	Estimated annual cash interest on the requested facility.
Annual principal	\$250,000	Straight-line annual principal where amortising.
Annual debt service	\$356,250	Interest plus scheduled principal used in DSCR.
Source of repayment	Operating cash flow from the combined group, supported by recurring service revenue and post-completion management accounts.	Primary cash source to service interest, principal and any bridge repayment.
Security package	general security and guarantee	Controls LVR and collateral diligence requirements.
Target LVR / advance rate	60.0%	Conservative lender advance-rate assumption supplied by the user.

ACCOUNTIQ BANK CREDIT PAPER

06 Security Package

Security is assessed by type, supplied value, target LVR, calculated LVR and the implied security value required where no appraisal is supplied. Fleet, property, GSA, guarantee and unsecured positions should each be confirmed with lender-form documents before committee.

Security structure supplied

- Transaction Structure: Acquisition and refinance debt are consolidated at HoldCo, with one senior term facility and a separate short-dated sponsor bridge.
- Borrower Structure: New HoldCo owns the existing operating company and the acquired target; both OpCos remain trading entities and provide guarantees.
- Ownership And Sponsor: Founder retains operating control; an incoming investor subscribes for a minority interest and contributes acquisition equity.
- Acquisition Rationale: Adds recurring customer relationships, geographic coverage and operating capacity; integration benefits remain subject to diligence.
- Refinance Context: Existing equipment debt is to be repaid at completion; payout letters and current lender security releases are required.
- Facility Structure: Senior term facility plus a separate sponsor bridge; bridge repayment is not assumed in senior DSCR.
- Security Structure: First-ranking GSA over the operating entities, cross-guarantees and shareholder support; no property security assumed.
- Sponsor Bridge Security: Personal guarantee and negative pledge to be documented separately from the OpCo security package.

Security / LVR item	Value	Credit comment
Security package	general security and guarantee	Confirms whether GSA, fleet, property, guarantee or unsecured treatment is being tested.
Security notes	General security over both OpCos, equipment register and guarantees; independent collateral confirmation required.	Operational detail to verify through PPSR, title, fleet schedule, property valuation or guarantees.
Security and guarantee structure	First-ranking GSA over the operating entities, cross-guarantees and shareholder support; no property security assumed.	Confirms GSAs, cross-guarantees, share pledges, property security and priority assumptions.
Supplied security value	\$2,050,000	Used for calculated LVR where supplied.
Target LVR / advance rate	60.0%	Conservative advance-rate assumption used for debt-capacity screening.
Calculated LVR on supplied security	61.0%	Shows facility amount divided by supplied collateral value.
Transaction LVR / LTV	65.8%	Shows facility amount divided by supplied transaction or asset value where provided.
Implied security value needed	Not available	Security value implied by the requested amount and target LVR when no appraised value is supplied.

Security / LVR item	Value	Credit comment
Lien / priority checks	Required before credit committee	PPSR, property title, prior-ranking debt, insurance and lender form-security documents required.
Sponsor bridge security	Personal guarantee and negative pledge to be documented separately from the OpCo security package.	Keep any personal bridge security separate from OpCo security and test its own enforceability.

ACCOUNTIQ BANK CREDIT PAPER

07 Financial Performance & Forecast

The uploaded trading history is the primary source for repayment capacity. The latest uploaded EBITDA is used as the credit anchor unless the user later supplies a lender-supported normalisation or QoE bridge.

Period	Revenue	EBITDA	Net profit	EBITDA margin
2023	\$2,800,000	\$410,000	\$228,000	14.6%
2024	\$3,250,000	\$505,000	\$300,000	15.5%
2025	\$3,760,000	\$620,000	\$382,000	16.5%

ACCOUNTIQ BANK CREDIT PAPER

08 Coverage Ratios & Sensitivity

Coverage and sensitivity are calculated from uploaded EBITDA and the requested funding terms. The table shows base coverage, rate stress and EBITDA downside. The amortisation profile then shows how leverage reduces through the proposed term where principal is scheduled.

Case	EBITDA	Funding cost	Cash interest	Annual principal	DSCR	ICR
Base case	\$620,000	8.50%	\$106,250	\$250,000	1.74x	5.84x
Rate stress +1.50%	\$620,000	10.00%	\$125,000	\$250,000	1.65x	4.96x
EBITDA downside -10%	\$558,000	8.50%	\$106,250	\$250,000	1.57x	5.25x
EBITDA downside -20%	\$496,000	8.50%	\$106,250	\$250,000	1.39x	4.67x

P&I leverage profile

Period	Opening debt	Principal	Interest	Closing debt	Debt / EBITDA
Year 1	\$1,250,000	\$250,000	\$106,250	\$1,000,000	2.02x
Year 2	\$1,000,000	\$250,000	\$85,000	\$750,000	1.61x
Year 3	\$750,000	\$250,000	\$63,750	\$500,000	1.21x
Year 4	\$500,000	\$250,000	\$42,500	\$250,000	0.81x
Year 5	\$250,000	\$250,000	\$21,250	\$0	0.40x

ACCOUNTIQ BANK CREDIT PAPER

09 Balance Sheet & Debt Capacity

The balance-sheet section shows the main operating assets and liabilities a lender needs to see: accounts receivable, stock, fixed assets, accounts payable, short-term debt, long-term debt, operating working capital and NTOA. NTOA is used here as a tangible operating asset proxy, not as a formal collateral valuation. Where the uploaded pack does not include a balance sheet, the section remains visible and the missing schedules become committee conditions.

Balance-sheet item	Latest extracted value	Credit relevance
Cash	\$185,000	Immediate liquidity and net-debt offset.
Accounts receivable	\$410,000	Core working-capital asset and borrowing-base support, subject to aging and eligibility.
Stock / inventory	\$95,000	Potential asset support if saleable and lender-eligible.
Fixed assets	\$520,000	Tangible asset support for fleet, equipment or plant security where appraisals are available.
Accounts payable	\$260,000	Operating liabilities that reduce net tangible operating asset support.
Short-term debt	\$95,000	Current interest-bearing obligations and refinance risk.
Long-term debt	\$280,000	Term borrowings that affect leverage and security priority.
Operating working capital	\$165,000	Receivables plus stock and other operating current assets less operating current liabilities.
NTOA	\$685,000	Net tangible operating assets used as a balance-sheet strength proxy before formal collateral valuation.
Borrowing-base proxy	\$615,000	Illustrative 75% receivables, 50% stock and 50% fixed-asset support before lender eligibility checks.

Debt-capacity constraints

Constraint	Supportable debt	Basis	Binding	Caveat
Leverage limit	\$1,550,000	2.50x latest uploaded EBITDA	No	Illustrative senior-debt leverage ceiling; final appetite depends on business quality and lender policy.
Interest-cover limit	\$2,431,373	3.00x minimum interest cover at 8.50% funding cost	No	Uses EBITDA / cash interest as a lender-view proxy.
DSCR / debt-service limit	\$1,553,885	1.40x minimum DSCR over a 5.0-year term	No	Uses straight-line amortisation unless the intake marks the facility as interest-only.
Collateral / LVR limit	\$1,230,000	60.0% LVR on supplied security value	No	Requires actual security valuation, ownership, lien priority and lender eligibility checks.
Balance-sheet / NTOA support	\$513,750	75% of net tangible operating assets from uploaded balance-sheet items	Yes	NTOA is an operating balance-sheet strength proxy, not a formal collateral valuation.

10 Industry & Competitive Landscape

Sector context

Demo-mode sector context for Business services is illustrative. Use a live AI key before relying on public-source market commentary.

Credit relevance

In a live run this section should be supported by public-source research into the borrower, sector, competitors, regulation, contracts, cyclicity and local operating footprint. In demo mode, treat the sector narrative as illustrative and rely on the uploaded financials for quantitative conclusions.

Market evidence	Status	Credit use
Sector and macro context	Illustrative demo context	Test demand, pricing and cost sensitivities before credit reliance.

ACCOUNTIQ BANK CREDIT PAPER

11 Proposed Covenants

The covenants below are proposed lender controls only. They are not agreed terms and should be checked against the bank's credit policy, facility type, borrower size and final EBITDA definition. The selected package is Balanced, covering Minimum DSCR, Minimum interest cover, Maximum senior leverage, No additional debt, Information reporting. User notes: Keep the senior package measurable and testable; bridge controls remain separate until repayment is documented.

Covenant / control	Proposed threshold or requirement	Mechanics / headroom	Why it matters
Minimum DSCR	$\geq 1.40x$	Test quarterly on trailing 12-month lender EBITDA / cash interest plus scheduled principal.	Protects principal and interest serviceability.
Minimum interest cover	$\geq 3.00x$	Test lender EBITDA / cash interest; base and rate-stress cases are shown in the coverage table.	Protects rate-risk headroom where interest cost moves against the borrower.
Maximum senior leverage	$\leq 2.50x$	Debt / latest uploaded EBITDA until formal lender EBITDA and permitted adjustments are agreed.	Constrains over-leverage and keeps debt sized to maintainable cash earnings.
No additional debt	No new financial indebtedness without lender consent	Permit ordinary-course trade creditors but restrict new loans, leases, asset finance or subordinated debt.	Prevents security dilution, hidden leverage and cash-flow leakage.
Information reporting	Monthly management accounts; annual accounts; compliance certificate	Timing, template and officer certification to be agreed with the bank.	Lets the lender monitor trading, covenant headroom and early-warning indicators.

ACCOUNTIQ BANK CREDIT PAPER

12 Key Risks & Mitigants

The key risks and mitigants are framed for credit committee: what could impair repayment, what protects the lender, and which conditions are required before reliance.

Risk	Credit impact	Mitigant / condition
Trading variance	Lower EBITDA reduces DSCR, ICR and leverage headroom.	Anchor the credit case on the latest uploaded EBITDA and require monthly management accounts before committee.
Interest-rate sensitivity	Higher funding cost compresses ICR and DSCR.	Use the conservative funding cost and +1.50% rate stress; consider hedging or fixed-rate tranche if bank policy requires.
Collateral value / lien priority	LVR support can fail if fleet/property values are stale or prior-ranking debt exists.	Require appraisals, PPSR/title searches, insurance, and bank-form security documents.
Balance-sheet support	Weak receivables, stock or fixed-asset support can make NTOA debt capacity binding.	Require AR/AP/stock aging, debt schedule and fixed-asset/fleet register.
Documentation and committee readiness	The paper is screening-only without signed terms, debt schedules, tax position and security documents.	Treat missing documents as conditions precedent before credit committee.
Management / key-person dependence	Owner/operator reliance can affect continuity and repayment source.	Confirm management bench, succession cover, key-person insurance and guarantor support where relevant.

ACCOUNTIQ BANK CREDIT PAPER

13 Conditions Precedent

These items are required before the paper could move from screening-only to bank credit committee. They are deliberately specific so the user can see what evidence is missing.

Priority	Required before credit committee	Why it matters	Likely source / owner
1	Latest management accounts and final FY financial statements	Confirms the EBITDA anchor, trading trend and cash conversion.	Borrower / accountant
1	Current debt schedule, payout letters and lender statements	Confirms existing debt, refinance need, pricing and security priority.	Borrower / existing lender
1	Signed or draft term sheet with facility amount, tenor, pricing, fees and repayment profile	Locks the structure tested in the paper.	Bank / borrower
1	Security schedule: fleet/equipment list, property title, PPSR searches and appraisals where applicable	Confirms collateral value, ownership and lien priority.	Borrower / valuer / solicitor
2	AR, AP and stock aging reports	Tests working-capital quality and borrowing-base eligibility.	Borrower / accountant
2	Tax status, GST/PAYE position and insurance certificates	Identifies leakage, arrears and asset-protection issues.	Borrower / accountant / broker
2	Companies Office extracts, ownership chart and guarantor information	Confirms borrower perimeter and guarantee/security parties.	Solicitor / borrower
3	Customer, contract, fleet, property or integration diligence relevant to the loan purpose	Supports risks and mitigants specific to the transaction.	Borrower / adviser

ACCOUNTIQ BANK CREDIT PAPER

14 Recommendation

We recommend treating this as a screening-only credit paper until the conditions precedent are cleared. On the uploaded financials and supplied facility assumptions, the requested facility of \$1,250,000 requires revised structure or additional support before committee; calculated supportable debt is \$513,750 with headroom / shortfall of \$-736,250. The binding constraint is Balance-sheet / NTOA support. The lender should proceed only if collateral, debt schedules, covenant definitions, tax status, management accounts and security documents support the structure.

Metric	Base case	Threshold / interpretation	Comment
Latest uploaded EBITDA	\$620,000	Credit anchor	Based on 2025.
Requested senior debt	\$1,250,000	Facility amount	Compared with EBITDA, debt service, LVR and NTOA constraints.
Senior leverage	2.02x	Illustrative max 2.50x	Debt divided by latest uploaded EBITDA.
Base ICR	5.84x	Minimum 3.00x	EBITDA divided by cash interest.
Base DSCR	1.74x	Minimum 1.40x	EBITDA divided by cash interest plus scheduled principal.
Target LVR	60.0%	Security advance-rate assumption	Must be confirmed against lender collateral policy.
Supportable debt	\$513,750	Minimum of capacity constraints	The binding constraint should drive the recommended structure.
Headroom / shortfall	\$-736,250	Positive is headroom	Supportable debt less requested debt.
Binding constraint	Balance-sheet / NTOA support	Most conservative available limit	Use this as the credit sizing conclusion unless overridden by bank policy.
